

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A whiteboard apparatus, comprising:
 - an electronic paper display device;
 - a writing surface arranged in superimposed relationship with the electronic paper display device; and
 - a scanning device, employed in the whiteboard apparatus, configured to convert a paper document into an electronic representation of the paper document;
 - a user interface device configured to enable a user to select the electronic representation of the paper document for display on the electronic paper display device; and for enabling the electronic paper display to present a user with a plurality of reference images grouped for display on the electronic paper display device during a whiteboard session to assist the user in drawing on the writing surface over a selected one of the plurality of reference images wherein the selected one of the plurality of reference images can include an image selected from the group: a single image, a partial image, and a single image displayed as partial images at different times during the whiteboard session.
 - an electronic paper display control module configured to display the electronic representation of the paper document on the electronic paper display device in response to a user selection for the electronic representation of the paper document through the user interface device.
2. (Previously Presented) The whiteboard apparatus of claim 1, wherein the electronic paper display device comprises:
 - a plurality of image elements, each of the image elements having one or more charged particles; and
 - logic configured to display the plurality of reference images by controlling the orientation of the charged particles.

3. (Original) The whiteboard apparatus of claim 1, wherein the electronic paper display device employs electronic ink technology.

4. (Currently Amended) The whiteboard apparatus of claim 1:
further comprising a network interface device configured to receive a for
~~communication with a communication network and wherein the~~ plurality of
reference images ~~displayed on the electronic paper display is received via the~~ from a
communication network~~[[.]]~~; wherein

the user interface device is further configured to enable a user to select from
the plurality of reference images a particular reference image for display on the
electronic paper display device; and

the electronic paper display control module is further configured to display
the particular reference image on the electronic paper display device in response to a
user selection for the particular reference image through the user interface device.

5. (Currently Amended) The whiteboard apparatus of claim ~~[[1]]~~ 4, wherein the
network interface device is further configured to receive a plurality of reference
images from the communication network, wherein at least one reference image from
~~[[of]]~~ the plurality of reference images comprises one of a Cartesian plane and an
object for a flowchart.

6-12. (Canceled)

13. (Currently Amended) The method of claim ~~[[10]]~~ 27, wherein displaying the
electronic representation of the paper document includes using the electronic paper
~~display device employs~~ electronic ink technology.

14-18. (Canceled)

19. (Currently Amended) The whiteboard apparatus of claim ~~[[1]]~~ 4, further
comprising~~[[:]]~~ a memory configured to store the plurality of reference images ~~to be~~
~~displayed on the electronic paper display device.~~

20. (Previously Presented) The whiteboard apparatus of claim 19, wherein the user interface device includes hardware buttons corresponding to a predefined image of the plurality of reference images stored in the memory.

21. (Previously Presented) The whiteboard apparatus of claim 19, wherein the user interface device includes a graphical user interface displayed on the electronic paper to enable a user to view and select from the electronic paper a predefined image of the plurality of reference images stored in the memory.

22. (Canceled)

23. (Currently Amended) The method of claim [[10]] 27, including further comprising the step of downloading a [[the]] predefined image to be displayed on the electronic paper display device.

24-25. (Canceled)

26. (Currently Amended) The method of claim [[10]] 28, further including: scanning with a second scanning device, employed in the whiteboard apparatus, the electronic representation of the paper document predefined image displayed on the electronic paper display device together with and the drawing on the writing surface, to form a display scan; and printing the display scan with a printer that is included in the whiteboard apparatus a scan of the predefined image displayed on the electronic paper display device and the drawing on the writing surface.

27. (New) A method comprising:
scanning a paper document, with a first scanning device employed in a whiteboard apparatus, to convert the paper document into an electronic representation of the paper document;
receiving a selection from a user, through a user interface device on the whiteboard apparatus, to display the electronic representation of the paper document;
and

displaying the electronic representation of the paper document, on an electronic paper display device in the whiteboard apparatus, in response to the selection from the user to display the electronic representation of the paper document.

28. (New) The method of claim 27, including receiving drawing on a writing surface of the whiteboard apparatus.
